

# Portable power bank capacity specifications

#### **Overview**

Power bank users often get mystified with the mismatch between the expected capacity of their purchased power banks and the actual number of charges that they get for their phones or tablets.

Most modern phones ship with fast charging technologies such as QuickCharge 3.0 or USB-C PD based fast charge. Such fast charging will charge your phone at.

Quality power banks have higher efficiency of up to 95% due to optimized circuits. Such power banks can better fine-tune voltage and reduce power wasted.

Quality short cables have lower resistance as they use copper and premium metal contacts and hence lead to less loss of power.

Charging via non-fast-charging 1 Amp or 2 Amp/2.1 Amp regular USB ports will ensure greater efficiency than charging at fast-charging high current.

What is the capacity of a power bank?

The capacity of a power bank is measured in milliampere-hours (mAh). In simple terms, a higher mAh means the power bank can hold more charge. Here's a basic breakdown: 5,000 mAh – Charges most smartphones about once. 10,000 mAh – Enough to charge a smartphone twice or a small tablet once.

How much Mah should a power bank hold?

In simple terms, a higher mAh means the power bank can hold more charge. Here's a basic breakdown: 5,000 mAh – Charges most smartphones about once. 10,000 mAh – Enough to charge a smartphone twice or a small tablet once. 20,000 mAh or more – Great for charging a phone multiple times or for charging tablets and some laptops.

How much does a power bank weigh?

Another new-age power bank like the Anker 737 — which has a capacity of

24,000 mAh — has a compact shape and weighs around 1.4 pounds. Besides that, it has USB-C fast charging ports. Note that conventional heavy-duty power banks take a long time to charge fully.

What size power Bank do I Need?

Fortunately, there's an easy equation to figure out the size you need. Let's say that your power bank has 5,000 mAh. You need to multiply the capacity by the volt rating to get the mWh: the megawatt-hour rating.

What voltage does a power bank output?

Voltage is like the pressure that pushes electrical current through your device. Most modern power banks are built to output either 5V, 9V, or even 12V depending on the type of charging they support (like standard charging or fast charging). A regular USB-A port usually outputs 5V.

How many mAh power bank should a laptop have?

Again, for a standard laptop, a 20,000 mAh power bank with a compatible USB-C PD port is the minimum requirement. You can also look at 30,000 mAh or 50,000 mAh power banks. On the other hand, if you are planning to go camping/hiking, it's best to rely on a heavy-duty power bank.
