

Power generation in charging stations

Overview

Charging stations are appearing all across the globe, ready to charge the electric cars of tomorrow. But where does that electricity come from, and is it clean?

.

We'll rip the band-aid off now: natural gas is the most common charging station power source. It's cheap, abundant, and accessible. But not.

You may go to a charging station and find a solar panel placed on top. Typically, those solar panels offset the grid power needed by a fraction.

Does the good outweigh the bad if you include energy generated by charging stations,?

In short, electric cars are cleaner but certainly.
