Overview

What is a container substation?

Home / Container substations, also known as mobile or prefabricated substations, are an increasingly popular solution in the field of electrical power distribution.

What is a small distribution substation?

Smaller distribution substations are subdivided into container-sized modules, which can be manufactured, assembled and tested at the factory, allowing easy transport and fast installation and commissioning at site.

What is a modular substation?

These modular substations represent a modern and innovative approach to electrical power distribution. Their portability, rapid deployment, cost-effectiveness, and reliability make them an attractive solution for a wide range of applications, from remote industrial sites to urban power grids.

Why are container substations important?

The flexibility, cost-effectiveness, and rapid deployment capabilities of container substations make them a crucial asset in industries where power demands can change rapidly or in areas where constructing a traditional substation would be impractical.

What is a power distribution container (PDC)?

Your e-house, or Power Distribution Container (PDC), is engineered in our facility with pre-installed components and wiring completed. Systems are fully parameterized, and system testing is performed before shipment to expedite installation and startup time. Rest easy, knowing your equipment is safe.

What is switchgear in a container substation?

Switchgear: This component is responsible for controlling, protecting, and isolating electrical equipment within the substation. Switchgear in a container substation typically includes circuit breakers, disconnect switches, and fuses, all designed to ensure the safe operation of the substation.
