

# Public market solar power generation system

### **Overview**

How much electricity does solar produce in 2022?

In 2022, PV represented approximately 46% of new U.S. electric generation capacity, compared to 4% in 2010. Solar still represented only 9.0% of net summer capacity and 4.7% of annual generation in 2022. However, 16 states generated more than 5% of their electricity from solar, with California leading the way at 27.3%.

How big is the solar power market?

The Solar Power market in the U.S. is projected to grow significantly, reaching an estimated value of USD 103.96 billion by 2032, driven by the need to combat climate change through renewable energy sources reinforced by government tax credit and feed-in-tariff programs.

What percentage of solar power is generated in 2021?

In 2021, solar represented 9.0% of net summer capacity and 4.7% of annual generation. Capacity is not proportional to generation, as certain technologies (e.g., natural gas) have lower capacity factors than others (e.g., nuclear). Sources: EIA, "Electric Power Monthly" Tables 6.1, 6.1A, February 2023, "Electricity Data Browser," April 10, 2023.

Will the global solar PV market grow in 2025?

Despite these headwinds, the global solar PV market is still expected to grow by 10% in 2025, reaching 655 GW under the Medium Scenario (see Fig. 4). This would mark a continuation of the deceleration trend following the extraordinary 85% growth in 2023 and the more moderate 33% in 2024.

How much solar power did the US solar industry install in 2024?

In 2024, the US solar industry installed nearly 50 gigawatts direct current (GWdc) of capacity, a 21% increase from 2023. This was the second consecutive year of record-breaking capacity. Solar accounted for 66% of all

new electricity-generating capacity added to the US grid in 2024, as the industry continued experiencing record growth.

Which segment led the solar energy industry in 2021?

The new installation source segment led the industry in 2021 and held the maximum share of more than 96.95% of the global revenue. Solar energy technology is in its adoption phase and many countries are promoting the installation of solar energy systems for power generation.
