

# Qatar double-glass photovoltaic modules

#### **Overview**

What are the different types of double glass module Photovoltaic Glass?

Monocrystalline silicon and polycrystalline silicon are the primary types of double glass module photovoltaic glass, with monocrystalline silicon dominating the market due to its higher efficiency and lifespan. Key market players include Canadian Solar, Hanwha, Neosun Energy, Sharp, AE Solar, and Amerisolar.

Where is double glass module Photovoltaic Glass used?

The Asia-Pacific region is the largest market for double glass module photovoltaic glass, accounting for over 60% of the global market share. The key countries in the region include China, India, and Japan.

What is the global double glass module Photovoltaic Glass market value?

The global double glass module photovoltaic glass market is projected to reach a value of USD 29.5 billion by 2033, exhibiting a CAGR of 11.5% during the forecast period from 2025 to 2033.

Are double-glass PV modules durable?

Double-glass PV modules are emerging as a technology which can deliver excellent performance and excellent durability at a competitive cost. In this paper a glass-glass module technology that uses liquid silicone encapsulation is described. The combination of the glass-glass structure and silicone is shown to lead to exceptional durability.

What is a double glass c-Si PV module?

Recently several double-glass (also called glass-glass or dual-glass modules) c-Si PV modules have been launched on the market, many of them by major PV manufacturers. These modules use a sheet of tempered glass at the rear of the module instead of the conventional polymer-based backsheet. There are several reasons why this structure is appealing.

What encapsulant materials can be used for PV modules?

Various encapsulant materials can be considered. Polyvinyl butyral (PVB) has been used for a long time for glass–glass PV modules, particularly for thin-film modules.
