

Related Flow Batteries

Overview

A flow battery, or redox flow battery (after reduction–oxidation), is a type of electrochemical cell where chemical energy is provided by two chemical components dissolved in liquids that are pumped through the system on separate sides of a membrane. Ion transfer inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circul. HistoryThe (Zn-Br2) was the original flow battery. John Doyle file patent on September 29, 1879. Zn-Br2 batteries have relatively high specific energy, and were demonstrated in electric car.

A flow battery is a rechargeable in which an containing one or more dissolved electroactive elements flows through an that reversibly converts to

Related Flow Batteries

What In The World Are Flow Batteries?

Flow batteries are rechargeable batteries where energy is stored in liquid electrolytes that flow through a system of cells. Unlike traditional lithium ...
