

Romanian government subsidies for energy storage charging stations

Overview

Aid is capped at €100,000 per megawatt-hour (MWh) of installed storage, with a maximum funding limit of €10 million per enterprise. The total budget of €150 million is to be distributed to at least 15 beneficiaries through a competitive tendering process. Does Romania offer a subsidy for battery energy storage systems?

From ESS News Romania has launched a new subsidy scheme for behind-the-meter battery energy storage systems to the tune of €150 million (\$158 million). With the funding secured from the Modernization Fund, the Ministry of Energy launched the competitive bidding call on Tuesday. Bids will be accepted until January 17, 2025.

Does Romania have a grant program for battery energy storage systems?

The Romanian Ministry of Energy has launched a grant program for battery energy storage systems developed in conjunction with existing renewable energy facilities – wind, solar, or hydro. From ESS News Romania has launched a new subsidy scheme for behind-the-meter battery energy storage systems to the tune of €150 million (\$158 million).

What is a battery energy storage scheme in Romania?

The aim of the scheme is to support investments in battery electricity storage facilities, allowing for a smooth integration of renewable energy coming from wind and solar sources in the Romanian power system. Under the scheme, the aid will take form of a direct grant to projects selected through a competitive bidding process.

Will Romania support the construction of electricity storage facilities?

Following the positive assessment of the Romanian Recovery and Resilience Plan, the Commission has approved a €103 million Romanian scheme to support the construction of electricity storage facilities.

When will a battery storage grant be available?

Bids will be accepted until January 17, 2025. Under the scheme, grants will be available for battery storage systems built alongside existing renewable energy plants – wind, solar or hydro. The storage capacity should annually absorb at least 75% of the energy produced by the renewable energy facility to which it is directly connected.
