

Saint Lucia Wind Solar and Energy Storage Project

Overview

Saint Lucia's NDC 3.0 sets an ambitious target to reduce greenhouse gas emissions from the energy and transport sectors by 22% in 2035, through enhanced deployment of wind and solar energy with battery storage, upgrades to the grid infrastructure, continued efforts to improve energy efficiency, and enhanced uptake of electric vehicles. What is the best energy source for Saint Lucia?

The NETS findings indicate that a portfolio of utility-owned solar, distributed solar, wind, and diesel together with energy storage offers the best economics for Saint Lucia.

How does electricity work in Saint Lucia?

The island's 180,000 residents and tourism-driven economy depend heavily on reliable electricity service. Today, that electricity is generated almost exclusively from imported diesel fuel, leaving Saint Lucia vulnerable to a costly and volatile energy source.

Is Saint Lucia a model for other small island developing states?

Saint Lucia's leadership in pursuing the NETS and the subsequent 3 MW solar farm solidify the island nation's position as a leader in the region and a model for other small island developing states that face similar challenges and opportunities in pursuing a sustainable energy transition.

Why is Saint Lucia a good place to live?

At the same time, the island boasts strong renewable resource potential, including solar, wind, and geothermal. Developing these resources in a manner that preserves the natural environment, supports local employment, and ensures a reliable and cost-effective electricity system represents a challenge and an opportunity for leaders in Saint Lucia.
