

Sierra Leone Power Storage

Overview

What type of energy is used in Sierra Leone?

Energy consumption in Sierra Leone is dominated by biomass, which accounts for over 80% of energy used. The largest source of biomass energy is wood fuel followed by charcoal, while the use of agricultural crop residues and bagasse in the sugar industry remains limited.

Is there a wind energy system in Sierra Leone?

There is a known wind energy system of 5kw in Sierra Leone, located in the Bonthe District, along the south coastline area. Energy consumption in Sierra Leone is dominated by biomass, which accounts for over 80% of energy used.

What investment opportunities does Sierra Leone offer?

Sierra Leone offers investment opportunities in several segments of the energy industry including wind energy, solar energy, hydro, and bioenergy. The Government of Sierra Leone is also seeking infrastructure investment to support expansion of energy distribution and transmission networks.

Why does Sierra Leone need infrastructure investment?

The Government of Sierra Leone is also seeking infrastructure investment to support expansion of energy distribution and transmission networks. Sierra Leone has good access to natural resources necessary for energy production such as access to viable wind speeds and sunshine for renewable wind and solar projects.

Why is solar power so expensive in Sierra Leone?

It is delivered at a very high cost with Sierra Leone having one of the highest electricity tariffs in the sub-region. There are numerous waterfalls for hydropower and abundant sunlight for solar power generation with an estimated hydro project potential of more than 1000MW, while solar opportunities are above 240 MW.

How much hydro power does Sierra Leone have?

According to the "Renewable Energy Statistics 2017" report by IRENA, Sierra Leone has 56 MW installed hydro power capacity.
