

Signal base station communication principle

Overview

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and .

Equipped with an electromagnetic wave antenna, often placed on a tall mast, the base station enables communication between mobile terminals (such as mobile phones or pagers) and the fixed part of the digital telecommunications network.

Signal base station communication principle

<u>Understanding How Cellular LTE</u> Networks Work

The Role of the Base Station The base station, also known as a cell tower, plays a vital role in cellular networks. It serves as the link between the mobile device and the network. The base ...
