

Slovakia Photovoltaic Wind Power Storage

Overview

Why is wind energy untapped in Slovakia?

Despite its high potential, wind energy remains largely untapped in Slovakia due to its perceived instability and regulatory hurdles. Since 2009, the construction of wind power plants has almost complitely halted, with two small wind parks existing in Cerová and Myjava.

Is biomass a viable energy source in Slovakia?

Biomass currently dominates electricity generation from renewables, followed by biogas, solar, and hydropower. Despite its high potential, wind energy remains largely untapped in Slovakia due to its perceived instability and regulatory hurdles.

What is the technical potential of solar energy in Slovakia?

The solar radiation flux achieves a maximum of 1,100 kWh/m2. The technical potential of solar energy has been estimated at 5,200 GWh annually, which is about 20 % of the total technical potential of renewable power sources in Slovakia. There is growing demand for supply of photovoltaic power plants and solar panels for installations on roofs.

What is a major investment in a photovoltaic power plant in Slovakia?

A major investment, currently in the permitting process, consists of the construction of the largest battery storage facility in Slovakia and a photovoltaic power plant with a planned capacity of 30 MW. The plant is expected to have 54,000 double-sided photovoltaic panels.

How much electricity is produced in Slovakia?

Approximately 54.7 % of the total production of 27,149 GWh of electricity in Slovakia was obtained from nuclear power stations, 21 % from conventional power stations, 14.4 % from hydro stations and 8.9 % from renewable sources. The total potential of renewable sources that Slovakia plans to utilize

is approximately 27,000 GWh per year.

Should SHPPs be integrated into Slovakia's energy mix?

The integration of SHPPs into Slovakia's energy mix could be a strategic move towards enhancing the country's energy landscape, offering a sustainable and efficient method to increase renewable energy production while contributing to local development and environmental conservation.
