

Slovenia home solar photovoltaic power generation and energy storage system

Overview

What is the potential of photovoltaic energy in Slovenia?

Slovenia offers great potential for exploiting photovoltaic energy due to evenly spread solar irradiation. The first photovoltaic power plant in Slovenia was set up in 2001. At the end of 2017, 4,231 photovoltaic power plants had been installed in Slovenia with a total power of 267 MW.

How much will Slovenia spend on solar energy projects?

Data Protection Policy Slovenia has set aside €16 million (\$16.7 million) to support solar energy communities, requiring projects to include at least 100 kW of PV capacity, with or without storage. The program will run until 2027.

How many PV installations did Slovenia have in 2023?

Slovenia recorded 400 MW of new PV installations in 2023, taking its total installed capacity to 1.1 GW, according to the latest figures from the Ministry of the Environment, Climate and Energy. This content is protected by copyright and may not be reused.

Does Slovenia have a solar market?

Slovenia's solar market is experiencing significant growth, with 85 MW of new capacity installed in the first half of 2025, according to PV Magazine. This expansion is driven by the increasing adoption of both residential and commercial and industrial (C&I) solar projects.

Where does Slovenia's electricity come from?

Approximately one-third of Slovenian electricity consumption is derived from two brown-coal and lignite fired power stations. These ageing power stations account for all of the domestically mined coal.

Will Slovenia subsidize new self-sufficient PV energy communities?

The Slovenian Ministry of Cohesion and Regional Development has launched a €16 million program to subsidize new self-sufficient PV energy communities. The government and Slovenia's EU Cohesion Policy Program are co-financing the initiative, the ministry said in a statement.
