

# Small communication base station lead-acid battery

### **Overview**

### What is a lead-acid battery?

Lead-acid batteries have long been the backbone of telecom systems. Their reliability and affordability make them a popular choice for many network operators. These batteries consist of lead dioxide and sponge lead, immersed in a sulfuric acid electrolyte. This simple design allows for efficient energy storage, crucial during power outages.

Why do telecom systems need batteries?

Telecom systems play a crucial role in keeping our world connected. From mobile phones to internet service providers, these networks need reliable power sources to function smoothly. That's where batteries come into play. They ensure that communication lines remain open, even during outages or emergencies. But not all batteries are created equal.

Are lithium-ion batteries the future of telecommunication?

With advancements continually being made in battery technology, lithium-ion remains at the forefront of innovative solutions for telecommunication needs. Nickel-cadmium (NiCd) batteries have carved out a niche in telecom systems due to their durability and reliability.
