

# Small wind power generation microsystem

#### **Overview**

Small wind turbines, also known as micro wind turbines or urban wind turbines, are that generate electricity for . These turbines are typically smaller than those found in . Small wind turbines often have passive as opposed to active ones. They use a generator and use a tail fin to point into the wind, whereas larger turbines have

Micro Wind Generators, often termed micro wind turbines, are small-scale wind power units designed for individual homes, businesses, or even mobile uses such as boating and camping. Typically, these generators have a power capacity of less than 1 kW to 1.5 kW.

OverviewDesignMarketsManufacturingFurther readingExternal links

Small wind turbines, also known as micro wind turbines or urban wind turbines, are wind turbines that generate electricity for small-scale use. These turbines are typically smaller than those found in wind farms. Small wind turbines often have passive yaw systems as opposed to active ones. They use a direct drive generator and use a tail fin to point into the wind, whereas larger turbines have geared powertrains
