

Solar panel costs drop

Overview

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024. Why did solar panel prices drop 30% in 2024?

Wood Mackenzie reported solar panel prices dropped 30% year-over-year in 2024. Prices may have also lowered due to softened demand, said EnergySage. Residential solar installations declined 31% in 2024. This is “driven by high interest rates, relatively stable residential electricity prices, and California’s Net Billing Tariff,” said the report.

Are residential solar prices falling?

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6.4% from the first half of 2024.

How much did solar panels cost in 2024?

Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in 2024. According to the report, the median quoted price of solar decreased for the third year in a row, hitting its lowest in recorded data at \$2.50 per watt.

Will solar panel prices drop by 2030?

According to PV magazine, experts believe that by 2030, solar panel prices will drop to an astonishing \$0.097 (£0.075) per watt. This decline is expected to fuel the virtuous cycle, meaning lower costs will drive technological advancements, improve the production process and increase economies of scale, resulting in even lower prices.

Why are solar panels so expensive?

Solar panel prices have fallen by approximately 20% every time global capacity has doubled, following a trend known as Wright's Law. Solar panels can convert 22% of sunlight into electricity, whereas the first solar panels could only convert 1-2% into electricity. This has helped drive down costs as the panels are more efficient.

Are solar & storage prices going down in 2024?

According to EnergySage's new Solar & Storage Marketplace Report, prices for both home solar and solar + storage reached record lows in the second half of 2024. EnergySage, an online solar shopping marketplace (and Electrek affiliate) analyzed millions of quotes from installers across the US in its 20th semiannual report.
