

Solar panel penetration rate and power generation

Overview

What is the average annual growth rate for solar PV?

We expect 8% average annual growth over the next five years. Commercial solar installations and Base case forecast, 2020-2029 3.3. Community solar PV.

What percentage of solar installations are residential?

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, reaching some 4.7 million installations in 2023. Increasing household electricity bills are a large motivator for the installation of residential solar systems.

Why are we expecting a contraction in solar capacity this year?

For the community solar segment, higher levels of penetration in mature state markets and a slow ramp-up of capacity in emerging markets due to interconnection challenges are leading to our expectations of a contraction this year. For utility-scale, more than half of the estimated capacity for the year is currently under construction.

How does new solar power capacity affect generation growth?

Wind and solar developers often bring their projects on line at the end of the calendar year. So, the new capacity tends to affect generation growth trends for the following year. Solar is the fastest-growing renewable source because of the larger capacity additions and favorable tax credits policies.

How much electricity does solar produce?

In 2014, solar produced approximately 0.7% of total U.S. electric generation. By 2023, solar grew to about 5.6% of electric generation. 2023 is the first year that solar has accounted for more than 5% of U.S. electricity generation. Note: EIA monthly data for 2023 are not final.

Does a low penetration rate affect PV capacity?

It can be concluded that at a low penetration rate of PV capacity on an energy basis, the overall value of PV capacity decreases. This is evident in Fig. 9, which shows that the maximum net load, which is typically lower when PV capacity is limited, remains constant between the 6% and 10% penetration curves.
