

# Solar power generation for home use in the United States and the United Arab Emirates

## **Overview**

How much solar energy does a home use in 2022?

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. The average US home uses about 11,000 kilowatt hours per year, meaning residential solar panels generated enough electricity to power 3.4 million homes in 2022.

Does residential solar power generate a lot of electricity?

While residential solar power currently generates just a fraction of the country's overall electricity, it has continued to grow rapidly in recent years, despite COVID-19-related supply chain issues, import restrictions and other obstacles.

How do humans use solar energy?

Humans have been using solar energy for centuries and first produced solar-powered electricity in the United States in 1954. Currently, solar energy can generate electricity in two ways: solar photovoltaics (PV) and solar thermal. Solar PV cells, such as rooftop solar panels, directly convert sunlight into electricity.

What percentage of Americans install solar energy in 2023?

Regionally, the percentage varied significantly. U.S. homes installed 6.8 GW of solar energy capacity in 2023, a 12% increase from 2022. Among homeowners without solar power, 66.5% express interest in installing in the future. Notable statistics regarding this cohort include the following:.

How many solar installations are there in the United States?

In that same year, solar energy accounted for 55 percent of new electricitygenerating capacity additions in the North American country. Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential

installations. This segment has grown in recent years, reaching some 4.7 million installations in 2023.

How much solar energy does the United States use?

The SEIA report tallies all types of solar energy, and in 2007 the United States installed 342 MW of solar photovoltaic (PV) electric power, 139 thermal megawatts (MW th) of solar water heating, 762 MW th of pool heating, and 21 MW th of solar space heating and cooling.
