Overview

Does Somalia have solar energy potential?

This research work outlines the status of solar energy potential in Somalia. The solar energy potential in Somalia has been analyzed, with national utilization and installed capacity reaching 41 MW. In a real case study, a solar photovoltaic system in Somalia achieved a performance ratio of 70.8%.

Can Somalia harness solar energy?

This study explores Somalia's energy profile and the potential for harnessing solar energy. The installed photovoltaic capacity was found to be 41 MW and contributed 11.9% of the total electricity generation. A case study on a solar power microgrid system in Bacadweyene, Somalia, is also presented.

Does Somalia have a solar system?

In Somalia, there has been substantial progress in solar capacity installation in recent years. For example, ESPs have employed 27 MW of PV systems in 2021 and beyond, and this represents a notable increase compared to previous years.

Does Somalia need a high-speed diesel generator?

Somalia relies mainly on high-speed diesel generator sets for electricity generation, using 121,000 L of diesel daily. This is expected to increase to 694,000 L by 2024 due to rapid urbanization [39, 40]. RE is a viable option for long-term energy development.

What is the Somali power master plan (SPMP)?

The Somali Power Master Plan (SPMP) outlines a strategy to increase energy production in RE sources and fossil fuels. The strategy permits an increase in energy access from 15% to 45% of the population by 2024, or a 6% annual rise, to cut energy prices.

Why is re installed capacity low in Somalia?

Additionally, the detailed results in Table 2 show that RE installed capacity in Somalia were still low compared to conventional due to a lack of investment, legislative framework, and limited technical capability. The average sunshine duration in Somalia ranges from 2900 to 3100 h per year, averaging 8–8.5 h per day.
