

Somalia s first wind power energy storage project

Overview

What happened to the energy infrastructure in Somalia?

When the 1991 uprising threw Somalia into a lasting civil war, the nationalized energy infrastructure was completely privatized overnight without regulation. What happened immediately was a total blackout with almost no electricity accessible to the country.

Can solar power help businesses in Somalia?

According to the World Bank, through the Somalia Business Catalytic Fund, solar company Solargen was able to begin an initiative to provide affordable solar power access to vendors, businesses and other entities in the town of Warsheikh and create more than 2,200 jobs through these businesses.

How much does energy cost in Somalia?

Depending on the region, the price can vary from \$0.30 per kWh to \$1.00 per kWh, starkly contrasting neighboring Ethiopia's price of \$0.06 per kWh. The scorching and consistent sunshine combined with ideal windy conditions means Somalia holds great renewable energy potential.

How does lack of energy planning affect Somalia?
