

## Southern Europe s first gravity energy storage project

#### **Overview**

Can gravity energy storage be used in Europe's deepest mines?

A Scottish company aims to demonstrate its gravity energy storage technology at full scale in one of Europe's deepest mines, near a small town in central Finland.

Could this be Europe's first gravistore deployment?

The Edinburgh company said: "The two organisations have now signed an agreement to transform a 530-metre-deep auxiliary shaft into a full-scale prototype of Gravitricity's technology – and anticipate this could become Europe's first GraviStore deployment.".

What is gravity's energy storage system?

Gravitricity's energy storage system, GraviStore, involves raising and lowering heavy weights in underground shafts, combining characteristics of lithium-ion batteries and pumped hydro storage. The system will be used to deliver up to 2MW of storage capacity, thereby providing balancing services to the Finnish network. Have you read?
