

# Suitable land for solar panels

#### **Overview**

As a rule, solar developers typically need at least 10 acres of viable land, or 200 acres for a utility-scale project. As a general rule of thumb, it takes approximately 6 to 8 acres to install the solar equipment and panel rows for a 1 MW (megawatt) site. How much land do you need for a solar project?

As a rule, solar developers typically need at least 10 acres of viable land, or 200 acres for a utility-scale project. As a general rule of thumb, it takes approximately 6 to 8 acres to install the solar equipment and panel rows for a 1 MW (megawatt) site.

Can I list land under 30 acres for solar farms?

You can list land under 30 acres for solar farms on LandApp's marketplace, it just may be more difficult to get it leased. Community Solar farms are generally a better fit for smaller parcels (5-10 acres): you can learn about the difference between Utility and Community-Scale Solar Farms here.

How to choose a suitable land for solar panels?

Exclusion Zones: Land must be free from topographical challenges, dwellings, flood zones, and other exclusion zones to be suitable for solar panels. Proximity to Infrastructure: Land near electrical infrastructure like substations and transmission lines is more attractive due to lower interconnection costs.

How to choose a solar farm land?

Another solar farm land requirement that is important to consider is the proximity to electrical infrastructure. The further away your land is from the electrical grid, the higher the cost of interconnection for the developer.

How much land does a utility-scale solar farm need?

The area required for utility-scale solar energy projects can greatly vary based on the specifics of the installation, such as its capacity and the solar technology used. As a general guideline, a utility-scale solar farm typically

requires about 5 to 10 acres of land per megawatt (MW) of installed capacity.

Can a solar farm be built on a land parcel?

If the land parcel isn't spacious enough to accommodate a solar farm, the project may not proceed. As a rule, solar developers typically need at least 10 acres of viable land, or 200 acres for a utility-scale project.
