

# Swedish rooftop photovoltaic panels

### **Overview**

Can roof-mounted solar PV systems be installed in Sweden?

A comprehensive analysis framework for roof-mounted solar PV systems is developed. Different scenarios are considered for the potential installation of PV systems. The potential capacity is 727-956 MWp and annual yield is 626-801 GWh for Västerås. 504 km usable roof area and 65-84 GWp installed capacity are estimated for Sweden.

How big is the solar PV market in Sweden?

By the end of 2019, a record of 287 MW p annual installation was made, which brought the total capacity to 698 MW p. However, compared with the potential, there is still huge space for the solar PV market in Sweden to grow. 5.3. Discussion: direct capital subsidy.

Does Sweden have a roadmap for solar PV?

Sweden lacks a roadmap or strategy on solar PV, but there are some reports by the Swedish Energy Agency including aspects on potential, barriers, roadmaps, etc.

Can solar PV systems be installed on roofs?

Installing solar PV systems on building rooftops increases the generation of renewable electricity without occupying additional land area. Furthermore, due to Sweden's vast territory and sparse population, many of the roofs might be large enough to fit solar PV systems.

Does Sweden have a photovoltaic subsidy system?

In Sweden, there are various national subsidy schemes to encourage new installations that implement photovoltaic (PV) technology as part of the goal of zero net greenhouse gas emissions by 2045; the introduction of the direct capital subsidy system in 2009 is worth highlighting here.

How much area is used for building integrated photovoltaics in Sweden?

An even older study conducted by Kjellsson in 1999 showed that a total area of 459 km 2 was usable for building integrated photovoltaics in Sweden. This area included detached houses, apartment buildings, premises, industrial buildings, agricultural buildings, and holiday houses. Table 8.
