

# Syria Energy Storage Power Station System

#### **Overview**

International sanctions against Syria further undermined Syria's electricity sector, including by barring foreign (i.e. European and Arab) entities from extending loans or implementing infrastructure projects and by straining Syria's ability to import fuel and spare parts.

According to the in 2022 almost all electricity was generated from and , like . But according to as of.

As of 2025 the country lacks a stable grid. In August 2025, had been increased due to increased exports of Azerbijani gas allowing for the reactivation of shutdown and.

Pre-2011In the 2000s, Syria's struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansion of.

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

What happens if a power station in Syria doesn't meet demand?

As of 2024 generation by power stations in Syria cannot meet demand, resulting in power cuts and air pollution from small diesel generators. The Ministry of Electricity aims to increase generating capacity to 12 GW by 2030.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.

Can the EU help Syria regain energy security?

Syria has many challenges. Energy is one. The EU can be part of the solution with a strong offer supporting domestic electricity generation and long-term energy system integration. Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges.

Should Syria become an energy hub?

In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity. For more than a decade, Syrians have been coping with severe energy shortages. Years of war and division have crippled over 50% of the country's electricity grid.
