

Syria Substation Energy Storage Station

Overview

Between 2015 and 2017, violence and looting destroyed three major power plants, namely the Aleppo Thermal Station, Zayzoon in Idlib, and al-Taim in Deir Ezzor. Pre-war, these three plants had accounted for almost one-fifth of Syria's total generation capacity.

According to the in 2022 almost all electricity was generated from and , like . But according to as of.

As of 2025 the country lacks a stable grid. In August 2025, had been increased due to increased exports of Azerbijani gas allowing for the reactivation of shutdown and.

Pre-2011In the 2000s, Syria's struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansion of.

Should the EU support energy generation in Syria?

In the short to medium term, it should support energy generation in Syria, especially in renewable electricity. In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity.

What happens if a power station in Syria doesn't meet demand?

As of 2024 generation by power stations in Syria cannot meet demand, resulting in power cuts and air pollution from small diesel generators. The Ministry of Electricity aims to increase generating capacity to 12 GW by 2030.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.

Should Syria become an energy hub?

In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity. For more than a decade, Syrians have been coping with severe energy shortages. Years of war and division have crippled over 50% of the country's electricity grid.

What happened to power grids in Syria in 2024?

In 2024 electricity grids needed war damage to be repaired. As of 2024 generation by power stations in Syria cannot meet demand, resulting in power cuts and air pollution from small diesel generators.

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.
