

Thailand s new energy storage plan

Overview

What is Thailand's 2024 Power Development Plan?

Thailand's 2024 power development plan (PDP) aims to increase renewable energy use, highlighting the importance of BESS alongside solar panels and wind turbines. This could create new business opportunities for entrepreneurs if prices decrease or new technologies emerge for stationary batteries.

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

What is Thailand's power development plan?

Thailand's Power Development Plan (PDP) outlines an ambitious goal: for renewables to exceed 50% of the national power mix in the future. Projects like floating solar farms on dam surfaces are already being piloted and could add up to 500 MW of capacity. But even as policies shift forward, challenges on the ground remain.

What is Thailand's energy policy?

Thailand's energy policy aims to promote clean energy as a means to enhance the country's competitiveness and attract foreign investment. The government is preparing to become a Digital Hub for ASEAN, with many investors showing interest in projects such as Data Centers and Cloud Services.

Why is Thailand transforming the energy sector?

The Thailand energy sector stands at a pivotal moment in its development, propelled by a convergence of political will, private sector innovation, and international cooperation. The country is not merely adapting to the energy

transition—it is helping to define it for the ASEAN region.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

Thailand s new energy storage plan

Thailand Needs More Battery Energy Storage Systems

In 2023, the Energy Policy and Planning Office (EPPO) partnered with relevant agencies to create an action plan promoting Thailand's battery energy storage industry. Four ...
