

The development of solar panels in China

Overview

The government incentives have also contributed to the curtailment of solar energy, as many of the solar projects have been built in northern and western regions of China where there is a low demand for electricity and a lack of infrastructure to transfer energy towards China's main power grid.

is the largest market in the world for both (PV) and . Its PV capacity crossed 1,000 gigawatt (one , 1 TW) in May 2025. By June 2025, China's PV capacity crossed 1.100.

A July 2019 report found that local air pollution (and sulfur dioxide) has decreased the available solar energy that can be.

Solar resourceChina has large potential for (CSP), especially in the southwestern part of the.

The growth of solar power industries worldwide has been rapidly accelerated by the growth of the solar market in China. Chinese-produced.

Photovoltaic research in China began in 1958 with the development of China's first piece of . Research continued with the development of solar cells for space.

As of at least 2024, China has one third of the world's installed solar panel capacity and is the largest domestic market for solar panels. Solar PV by province.

China is the leading country for capacity in the world, with 290 in operation at the end of 2014, accounting for about 70% of the total world capacity. In terms of.
