

# The difference between square and round lithium batteries

#### **Overview**

#### What is a round lithium battery?

The round lithium battery refers to the cylindrical lithium battery. Because the history of the 18650 cylindrical lithium battery is quite long, the market penetration rate is very high. The cylindrical lithium battery adopts various mature replacement processes, the degree of automation is high, and the product mass transfer is stable.

What is a rectangular lithium battery?

Rectangular lithium battery usually refers to an aluminum shell or steel shell rectangular battery. The expansion rate of the rectangular battery is very high in China. It is the rise of automobile power battery in recent years. The difference between vehicle cruising range and battery capacity is becoming more and more obvious.

What is the difference between a circular battery and a rectangular battery?

The circular battery is relatively easy to use, so the packing scheme is simple, the heat dissipation effect is good, and the rectangular battery pack should solve the problem of heat dissipation. the chemical activity of the rectangular battery is poor, and the performance of the battery for long-term use is more obvious.

What are the different types of lithium battery structures?

At present, there are three main types of mainstream lithium battery structures, namely, cylindrical, rectangular and pouch cells. Different lithium battery structure means different characteristics, and each has its own advantages and disadvantages. 1. The cylindrical lithium battery structure.

Do all lithium batteries have cylindrical cells?

After watching some tear-down videos on YouTube with various lithium battery products (portable chargers, laptop battery, power tools) they all

(apart from mobile phones / tablet battery) seem to feature cylindrical battery cells.

What is the difference between a lithium battery and a pouch cell?

pouch cell weight is 40% lighter than steel shell lithium battery of the same capacity, 20% lighter than aluminum shell lithium battery. and the internal resistance of the pouch cell is smaller than that of the lithium battery, which can greatly reduce the self-consumption of the battery.
