

# The world s first liquid flow battery

#### **Overview**

Researchers in Australia have created a new kind of water-based "flow battery" that could transform how households store rooftop solar energy. Credit: Stock Monash scientists designed a fast, safe liquid battery for home solar. The system could outperform expensive lithium-ion options. Are flow batteries the future of energy storage?

Flow batteries are emerging as a transformative technology for large-scale energy storage, offering scalability and long-duration storage to address the intermittency of renewable energy sources like solar and wind.

How do flow batteries work?

"Flow batteries work a bit like two fish tanks joined by a membrane barrier that allows ions to pass through, enabling energy storage and release," Dr Doherty said. "We've developed a new type of membrane inside the battery that guides the flow of materials better – kind of like adding lanes to a highway.

Are flow batteries better than traditional lithium-ion batteries?

Flow batteries, which store energy in liquid electrolytes housed in separate tanks, offer several advantages over traditional lithium-ion batteries.

Are flow batteries a silver bullet?

While flow batteries could play a significant role in integrating renewable energy into the grid, they are not a silver bullet. The energy demands of modern society, particularly from industries like data centers, are immense and growing.

What makes a Nafion battery better than a flow battery?

The battery outperforms the industry-standard Nafion membrane in both speed and stability, completing 600 high-current cycles with virtually no capacity loss. This advancement represents a major leap forward for flow

batteries, which have historically been limited to large-scale applications due to their size and slow charging capabilities.

Are flow batteries a step in the right direction?

Flow batteries are a step in the right direction, but they are just one piece of the puzzle. A truly sustainable energy future requires pragmatism, not ideology, and a recognition that diversity in energy sources is our greatest strength. Sources include: CleanTechnica.com

#### The world s first liquid flow battery

### New liquid battery could break solar storage barrier for Aussie ...

Engineers have developed a water-based battery that could help Australian households store rooftop solar energy more safely, cheaply, and efficiently than ever before.
