

Three solar-powered telecommunications base stations on the top floor

Overview

Are solar powered cellular base stations a viable solution?

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base stations.

Are solar powered base stations a good idea?

Base stations that are powered by energy harvested from solar radiation not only reduce the carbon footprint of cellular networks, they can also be implemented with lower capital cost as compared to those using grid or conventional sources of energy . There is a second factor driving the interest in solar powered base stations.

What are the components of a solar powered base station?

solar powered BS typically consists of PV panels, bat- teries, an integrated power unit, and the load. This section describes these components. Photovoltaic panels are arrays of solar PV cells to convert the solar energy to electricity, thus providing the power to run the base station and to charge the batteries.

What is a solar powered BS?

The following configurations are common for solar powered BSs: Solar stand alone: The BS is powered solely by solar power and the batteries. Grid-connected: The BS is powered by energy har- vested from PV panels, but in case it falls short, power from grid is used.

How much power does a base station use?

BSs are categorized according to their power consumption in descending order as: macro, micro, mini and femto. Among these, macro base stations are the primary ones in terms of deployment and have power consumption

ranging from 0.5 to 2 kW. BSs consume around 60% of the overall power consumption in cellular networks.

Why do telecom operators need a diesel base station?

Unfortunately, many of these regions lack reliable grid connectivity and telecom operators are thus forced to use conventional sources such as diesel to power the base stations, leading to higher operating costs and emissions.
