

## **Togo Base Station Power Supply Plant Cost Price**

#### **Overview**

When fully constituted, the power station will supply 532 GWh of power annually. This electricity will be sold directly to Togo Electricity Company (Compagnie énergie électrique du Togo), under a 25-year. The energy generated is enough to supply 250,000 Togolese households or 1.5 million people, equivalent to an estimated 20 percent of the population of the country.

How many power plants are there in Togo?

Currently, seven power plants are operated with fossil fuels in Togo with a cumulated capacity of ~260 MW. These so-called thermal power plants use thermal gas, thermal oil and thermal DDO to produce electrical energy. Most of the power plants of this type are managed by the grid operator and utility CEET.

Who manages the power plants in Togo?

Most of the power plants of this type are managed by the grid operator and utility CEET. The largest two run by CEET are located in the capital Lomé and have a capacity of 12MW each. The largest thermal power plant in Togo is operated by Contour Global, a private company and has a capacity of 100 MW.

Where is the largest thermal power plant in Togo?

The largest two run by CEET are located in the capital Lomé and have a capacity of 12MW each. The largest thermal power plant in Togo is operated by Contour Global, a private company and has a capacity of 100 MW. The power plant can be operated with natural gas or heavy fuel oil as main fuel and diesel as reserve.

How much energy does Togo use?

In total, electricity supply of 1.162 GWh is thus achieved through distribution losses, resulting in a final electricity consumption of 876 GWh. Togo's total energy consumption is divided into three sectors. The largest share, 76%, is in the use of biomass, followed by petroleum products 20%. Only 4% of energy is

used in the form of electricity.

Where does Togo's energy come from?

Togo's energy consumption comes from three sources: biomass, petroleum products and electricity. Biomass consumption comes entirely from domestic resources. The total production amounts to 31.788 GWh of primary energy, with the largest part coming from firewood and the rest from plant waste.

Which hydropower plant is the largest in Togo?

The largest hydropower plant, the Nangbeto Hydropower Plant, has been in operation for several years and makes a major contribution to the electricity supply in Togo. Many smaller power plants are already planned. Direct use of Biomass: Vegetal biomass consists of forest resources and plants wastes.
