

# **Tracking PV panel prices**

#### **Overview**

For a typical solar tracker installation, you can expect costs in the range of \$80,000 to \$150,000 per MW. The exact figure will depend on the type of tracker chosen, project scale, and installation specifics. Are solar trackers expensive?

Solar trackers are very expensive and can easily double project costs. Solar trackers are made up of moving parts, which means they are more likely to break. This leads to higher maintenance costs. Deciding to install trackers may require additional site planning and preparation, including digging additional wiring trenches and extra site grading.

How do market analysts evaluate the cost of PV systems?

Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors are evaluated each year.

What is PV system cost model (pvscm)?

The total cost over the service life of the system is amortized to give a levelized cost per year. In the PV System Cost Model (PVSCM), the owner's overnight capital expense (cash cost) for an installed PV system is divided into eight categories, which are the same for the utility-scale, commercial, and residential PV market segments:

How does Seto calculate PV system cost?

Unlike most PV cost studies that report values solely in dollars per watt, SETO's PV system cost benchmark reports values using intrinsic units for each component. For example, the cost of a mounting structure is given in dollars per square meter of modules supported by that structure.

How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m 2 and a rated power of 400 watts, corresponding to an efficiency of 21.1%.

What is the representative commercial PV system for 2024?

The representative commercial PV system for 2024 is an agrivoltaics system (APV) designed for land that is also used for grazing sheep. The system has a power rating of 3 MW dc (the sum of the system's module ratings). Each module has an area (with frame) of 2.57 m 2 and a rated power of 530 watts, corresponding to an efficiency of 20.6%.
