

# **US Energy Storage Cabinet Battery Production Base**

### **Overview**

Will American-made batteries meet 100% of domestic energy storage demand?

It aims to enable American-made batteries to meet 100% of domestic energy storage project demand—a dramatic shift from the current landscape where most batteries used in the United States are imported, primarily from China. This ambitious initiative comes at a critical juncture.

Will US energy storage industry invest \$100 billion in grid batteries?

"The U.S. energy storage industry is committing over \$100 billion of investment in the next five years to build and to buy American-made grid batteries," declared Jason Grumet, CEO of ACP, during the announcement.

Will a fully domestic battery supply chain reshape America's energy landscape?

It's against this backdrop that the American Clean Power Association made a stunning announcement today: U.S. energy storage manufacturers and developers are committing \$100 billion over the next five years to establish a fully domestic battery supply chain, a move that could fundamentally reshape America's energy landscape and manufacturing base.

Which energy storage technology is most popular in 2024?

Batteries became the main energy storage technology in the United States in 2024, surpassing hydro pumped storage. After showing a year-over-year increase of 80 percent in 2023, the capacity of battery storage installations in the U.S. was projected to reach almost 30 gigawatts by the end of 2024.

Where are battery storage projects located?

That year, the number of operational and prospective battery storage projects grazed 1,000, with most of them located in California and Texas. Moss Landing, a hybrid natural gas plant for electricity generation paired with the

largest battery plant operative in the U.S. as of January 2025, was located in the golden state.

What does the \$100 billion pledge mean for battery manufacturing?

The \$100 billion pledge represents approximately three times the cumulative capital expenditure deployed in U.S. battery manufacturing since the 2010s.
