

Ukraine accelerates the reduction of electricity costs for 5G base stations

Overview

Should Ukraine build a decentralized and diversified energy system?

The Ukrainian government (2023) recently declared that building a decentralized and diversified energy system—one that is more resilient against military attacks or natural disasters and can enhance energy security while facilitating the transition to renewable energy sources (RES)—will be a key priority.

Are distributed energy resources a solution to Ukraine's power deficit?

Since Russia's full-scale invasion of Ukraine in February 2022, nearly twothirds of Ukraine's dispatchable power capacity has been occupied, damaged, or destroyed. The report highlights distributed energy resources (DERs) as a vital solution to address their power deficit while enhancing Ukraine's energy security, resilience, and flexibility.

What is Ukraine's energy roadmap?

A roadmap for Ukraine's increased use of distributed energy resources towards 2030 This roadmap from the IEA, Empowering Ukraine through a Decentralised Energy System, outlines a pathway to rebuild and modernise Ukraine's power sector amid ongoing attacks on its energy infrastructure.

How can a 'energy as a service' company help Ukraine?

The most immediate step entails rapid engagement with "energy as a service" providers who can bring equipment to Ukraine, who know how to operate under adverse conditions, and who can set the stage for sequentially indigenizing the operations.

Is Russia stalling Ukraine's 5G plans?

While many operators across Europe have focused on launching 5G networks, the same can't be said for Ukraine. Speaking to DCD, Stanislav Prybytko, director general of the directorate for mobile broadband for Ukraine's Ministry

of Digital Transformation, explains that the war with Russia has stalled the country's 5G goals.

What kind of energy does Ukraine need?

Ukraine heavily depends on imported oil, coal and natural gas Before the war, Ukraine's energy needs were met through a mix of domestic production and imports. According to the International Energy Agency (IEA), Ukraine's total energy supply in 2022 comprised coal (21.7%), nuclear (26.5%), natural gas (25.1%) and oil (18.6%).

Ukraine accelerates the reduction of electricity costs for 5G base st

Executive summary - Empowering Ukraine Through a ...

With the appropriate policies and regulations in place, this diverse DER scenario would reduce annual system costs by an estimated 5.6.% through operational savings, particularly in terms
