

Uruguayan organic photovoltaic energy storage company

Overview

How much of Uruguay's energy mix is based on fossil fuels?

In 2007, fossil fuels still accounted for over 30% of Uruguay's energy mix, according to the World Resources Institute. The question then was: how could this number plummet to a mere 2% within seventeen years?

The answer lay in a strategic pivot towards renewable energy sources, particularly wind power.

How did the energy industry change in Uruguay?

The true transformation began with a bold bet on wind energy. By 2008, Uruguay was experiencing economic growth that outpaced its existing energy supply. As demand surged, blackouts became more frequent, leading to increased electricity bills and the implementation of rationing measures.

Why should we invest in wind energy in Uruguay?

By overcoming early challenges and embracing wind energy, Uruguay has not only secured a cleaner and more reliable energy future but has also created economic opportunities and set an example for the world to follow.
