

Vatican grid-side energy storage

Overview

Why does the Vatican have a solar system?

The Vatican's solar shift is a culmination of a political and spiritual mission years in the making. In 2024, the late Pope Francis issued an apostolic letter ordering the construction of an agrivoltaic solar plant to supply the Vatican with energy from Santa Maria di Galeria. On the same site, the new solar infrastructure now stands.

How will the Vatican's new energy system work?

According to the Vatican's press office, the installation will apply the most advanced solutions currently available, balancing clean energy generation with the preservation of agricultural use, the region's hydrogeological stability, and the protection of its cultural and archaeological heritage (ZENIT News / Rome, 08.01.2025).-.

What is the Vatican doing to reduce waste?

The project will also include agricultural activity, creating an "agrivoltaic" site that combines solar energy production with farming. In terms of waste, the Vatican is working to increase its recycling rate from 65% to 75%, surpassing the EU average of around 49% (Eurostat, 2022).

Is the Vatican going green?

The Vatican has introduced low-energy lighting systems; over 100,000 LED lights have replaced older fixtures, cutting energy consumption by up to 90% while protecting delicate frescoes from heat exposure. The Vatican is going green with solar panels, EVs, and net-zero goals—blending faith and climate action in a push for sustainability.
