

What are Cambodia s 5G hybrid energy base stations

Overview

Will 5G be available in Cambodia?

KINGTEL has a master plan to build 3,000 base stations of 5G in Cambodia over 2 to 3 years including the first phase of 5G SA core network, transmission network and related technical equipment. It is expected that 5G SA network will be commercially available and accessible for more than 90% of Cambodian population by the end of 2020.

Will Cambodia support 5G networks in 2023?

In order to support 5G networks, the Cambodian government and mobile service providers have been upgrading the nation's telecom infrastructure. The Cambodian government has set a target of 2023 for the commercial rollout of 5G networks. In order to achieve this goal, the government has allocated 200 MHz of spectrum for 5G use.

How will 5G impact Cambodia?

The rollout of 5G in Cambodia is expected to have a significant impact on the country's economy. 5G is expected to boost economic growth by creating new jobs, attracting foreign investment, and improving productivity. 5G is also expected to improve the quality of life for Cambodians by providing faster and more reliable internet access.

How much spectrum is needed for 5G in Cambodia?

In order to achieve this goal, the government has allocated 200 MHz of spectrum for 5G use. The government has also established a task force to oversee the development and deployment of 5G in Cambodia. Several mobile operators in Cambodia have expressed interest in deploying 5G networks.

How will a 5G base station affect energy costs?

According to the mobile telephone network (MTN), which is a multinational mobile telecommunications company, report (Walker, 2020), the dense layer

of small cell and more antennas requirements will cause energy costs to grow because of up to twice or more power consumption of a 5G base station than the power of a 4G base station.

Why is Thailand implementing 5G technology?

Thailand is currently implementing 5G technology. The nation intends to modernize its current mobile network infrastructure so that it can accommodate 5G services and give people access to faster internet speeds, lower latency, and better connectivity.
