

What are the lithium battery energy storage power stations in the UK

Overview

Where is the UK's largest battery energy storage system?

The UK's largest battery energy storage system has gone live in North Yorkshire. Lakeside Energy Park is a 100MW facility in Drax, near Selby, which can provide power to about 30,000 homes a day across England and Wales.

Is the UK a good market for battery energy storage?

The UK is known to be one of the world's most active markets for battery energy storage. In 2022, the market saw a record 800 MWh of new storage capacity being added. This took the UK's operational energy storage capacity to 2.4 GW and 2.6 GWh, spread across more than 160 sites.

What is a lithium-ion battery storage project?

The electro-chemical battery storage project uses lithium-ion battery storage technology. The project was announced in 2020 and will be commissioned in 2024. The project is owned by Quinbrook Infrastructure Partners and developed by Wirsol Energy; Hive Energy.

What is a battery energy storage system?

Battery energy storage systems (BESS) are used to store energy from renewables, like solar and wind, and then release it when the power is needed most. Mark Selvaratnam, project manager of Lakeside Energy Park, said the facility would have a "significant impact" on the country's clean energy transition.

What is a battery storage plant?

In short, battery storage plants, or battery energy storage systems (BESS), are a way to stockpile energy from renewable sources and release it when needed. When the wind blows and the sun shines turbines and solar panels may generate more energy than needed on a particular day.

What is a Capenhurst battery energy storage system?

Capenhurst is a 100MW connection battery energy storage system. It employs lithium-ion batteries and has the capacity to store 107 MWh of electricity. Capenhurst delivers reactive power services to the grid and ensures power supply security for the Mersey region.
