

What are the wind power projects for communication base stations in the United States

Overview

There are three operating offshore wind farms in the United States, and several more are in permitting or under construction. The studies potential sites in federal waters for offshore wind energy development and leases sites to developers, who work with state regulatory agencies to interconnect and market their electricity.

Which wind power projects are under development in the United States?

Numerous wind power projects are also under development, promising a significant boost to the country's offshore wind capacity. New England Wind 1, led by Iberdrola in Massachusetts, plans to start construction in 2025, delivering 791 MW by 2029.

How often is the offshore wind power hub newsletter published?

The newsletter is published every other month. You can unsubscribe at any time. The Offshore Wind Power Hub tracks offshore wind policies, projects, and lease areas in the United States, and provides a platform for advocates and policymakers to collaborate and share resources.

Which wind projects are under construction?

Wind projects under construction Under construction are several large-scale projects. Revolution Wind, a partnership between Orsted and Skyborn Renewables, spans Rhode Island and Massachusetts, with construction commencing in 2023 and a projected 704 MW capacity by 2026.

How many offshore wind farms are there?

There are three operating offshore wind farms in the United States, and several more are in permitting or under construction.

How many homes will offshore wind power?

Our portfolio of offshore wind farms will produce enough clean energy to power nearly 1.5 million American homes. We're operating and developing nearly 2.8 GW of offshore wind capacity along the East Coast. As the global

leader, we have over 30 years of experience in building and operating offshore wind power.

Which states have the highest offshore wind energy capacity?

New Jersey and New York combine for the highest energy capacity in the U.S. offshore wind energy pipeline, with more than 20,000 MW, followed by Massachusetts (8,189 MW), and California (6,102 MW). State policies across 13 states aim to procure 112,286 MW of offshore wind capacity by 2050.
