How is Greece transforming its energy system?

Greece is undergoing a major transformation in how it generates, delivers, and prices electricity. From a fossil-heavy past to a renewable-powered future, the country is embracing a cleaner and more competitive energy model—driven by policy, market innovation, and consumer choice.

What happened to Greece's electricity prices in 2022?

The monthly average electricity baseload price in Greece's day-ahead market (DAM) peaked at 436.5 euros per megawatt-hour in August 2022, roughly quadrupling in comparison to a year earlier. In the second half of 2022 and in 2023, prices started to decline, although they were still not at the pre-pandemic level as of July 2024.

What is Greece's energy mix?

Greece's energy sector has undergone significant changes over the years. The country's energy mix primarily comprises renewable sources, natural gas, and lignite. Renewable energy, especially wind and solar power, has been steadily rising in contribution. Lignite, a type of coal, historically has been a dominant source of electricity in Greece.
