

What size inverter should I use for a 48V photovoltaic panel

Overview

What size solar inverter do I Need?

A 4.5 kW array (or ten 450-watt solar panels) would just about cover your consumption. The type of solar panels you choose can also impact the size of the inverter you need. Different types of solar panels have different wattage ratings and efficiency levels. The three main types of solar panels are monocrystalline, polycrystalline, and thin film.

Should your inverter size match your solar panel size?

Match your inverter to your lifestyle, not just your roof. If you're running a fridge, home office, and PS5 all day, size accordingly. If you're barely home, go leaner. Here's the cheat code: your inverter size should usually match your solar panel system's size in kilowatts.

Should a solar inverter be oversized?

However, slight over-sizing of the solar panels compared to the inverter capacity (up to 133% under certain guidelines) can sometimes yield better overall efficiency due to the variable nature of solar irradiation throughout the day. The ratio for inverter sizing often depends on specific system requirements and local regulations.

Can a solar inverter be bigger than the DC rating?

The size of your solar inverter can be larger or smaller than the DC rating of your solar array, to a certain extent. The array-to-inverter ratio of a solar panel system is the DC rating of your solar array divided by the maximum AC output of your inverter. For example, if your array is 6 kW with a 6000 W inverter, the array-to-inverter ratio is 1.

How to choose a solar inverter?

Choose an inverter that has a surge watt rating equal to or greater than this value. As for voltage drop, check the wire length between your solar panels

and the batteries. If the wire length is long, you may need to choose a lower voltage system (12V, 24V, or 48V) to minimize voltage drop.

How do I know if my solar inverter is efficient?

In the graph below, the red line represents an average inverter efficiency and the green arrow represents the power output from your solar panels. The grey box shows the operational window of the inverter based on the input from the solar panels and the predetermined efficiency of the inverter.
