

# What to do if you are caught while connecting the inverter to the communication base station

#### **Overview**

What should I do if my inverter is not charging properly?

Faulty Charging Circuit: A malfunctioning charging circuit can prevent the battery from charging properly, leading to quick drainage. Check the charging circuit and replace any defective components. Check for Parasitic Loads: Even when the inverter is off, some devices may still draw power.

When do I need to reconfigure my inverter communication?

You may need to reconfigure your inverter communication in certain cases, such as when your Wi-Fi network or password has changed. To configure your inverter communication: Log into mySolarEdge - contact your installer if you still need a Username/Password to access the Monitoring Platform. Tap "Inverter Communication " in the menu.

How do I fix a faulty inverter?

Here's how to address common error codes: Low Voltage Error: Indicates that the battery voltage is too low. Charge the battery and reset the inverter. Overload Error: Reduce the connected load to within the inverter's rated capacity. Over Temperature Error: Move the inverter to a cooler location and ensure adequate ventilation.

What is the best way to wire an inverter?

Proper wiring and connections are crucial for the safe and efficient operation of an inverter. Always use cables that match the inverter's power rating, as undersized wires can cause voltage drops, overheating, or even fire hazards.

How do I protect my inverter from overcurrent & short circuits?

Install Safety Devices Installing fuses or circuit breakers on both the AC and DC sides of the inverter is vital for protecting against overcurrent and short circuits. These devices help prevent damage to the inverter and connected equipment by interrupting the flow of electricity in case of an overload or

How do I know if my inverter is working properly?

Ensure that the inverter is receiving sufficient sunlight for efficient operation. Check the DC and AC connections for any loose or damaged wires. Inspect the inverter display for error codes or abnormal readings. Verify that the inverter is properly connected to the monitoring system.
