

# Which industries can use wind power storage

#### **Overview**

Can wind energy be used as a storage technology?

In the study, the Stanford team considered a variety of storage technologies for the grid, including batteries and geologic systems, such as pumped hydroelectric storage. For the wind industry, the findings were very favorable. "Wind technologies generate far more energy than they consume," Dale said.

Can wind energy be stored on demand?

A big challenge for utilities is finding new ways to store surplus wind energy and deliver it on demand. It takes lots of energy to build wind turbines and batteries for the electric grid. But Stanford scientists have found that the global wind industry produces enough electricity to easily afford the energetic cost of building grid-scale storage.

Can the wind industry afford a lot of storage?

Writing in the March 19 online edition of the journal Energy & Environmental Science, Dale and his Stanford colleagues found that, from an energetic perspective, the wind industry can easily afford lots of storage, enough to provide more than three days of uninterrupted power.

What are the most sustainable uses of wind power?

One of the most sustainable uses of wind power is Wind Farms for Electricity Generation. A wind farm is a type of power plant where many wind turbines are used to produce electricity. The electricity we produce in wind farms has almost zero carbon footprint.

Which industries use the most energy?

Currently less than 15% of industrial energy consumed is electricity. The most energy-intensive industries, such as iron and steel, cement, bulk chemicals, refining, and food and beverage manufacturing, still use fossil fuels for most process heating (the heat that powers manufacturing).

### Does wind energy produce more energy?

For the wind industry, the findings were very favorable. "Wind technologies generate far more energy than they consume," Dale said. "Our study showed that wind actually produces enough surplus electricity to support up to 72 hours of either battery or geologic storage.
