

Which is the earliest lithium battery energy storage project

Overview

1989:The recall of Moli Energy cells, comprising lithium metal, abruptly changed researchers' perception in favor of heavier but safer dual-intercalation (i.e. lithium-ion rather than lithium-metal) batteries.

- 1960s: Much of the that led to the development of the compounds that form the core of lithium-ion.
- 1974: Besenhard was the first to show reversibility of Li-ion intercalation into graphite anodes, using organic solvents, including carbonate solvents.

The performance and capacity of lithium-ion batteries increased as development progressed. • 1991: and started commercial sale of the first rechargeable.

• 2006 July (prototype): 6,831 cells; used in the • 2011: (NMC) cathodes, developed at , are manufactured commercially by BASF in Ohio.

Industry produced about 660 million cylindrical lithium-ion cells in 2012; the size is by far the most popular for cylindrical cells. If were to have met its goal of shipping 40,000 in 2014 and if the 85 kWh battery, which uses 7,104 of.
