

# Wind Power Market and Power System

#### **Overview**

As per WWEA 2024 assessment, the contribution of wind energy accounts for over 10 percent of the world's power supply. The adoption of more cost efficient and higher energy producing designs and larger wind turbines is leading to a greater penetration into the wind power market.

Wind Energy Market was valued at more than USD 146.4 billion in 2023 and is expected to grow more than 13.8% CAGR from 2024 to 2032. Wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. It involves converting.

The competitive landscape for onshore wind energy is characterized by a mix of established players, emerging companies, and technological.

Growing integration with other renewable energy sources and storage solutions to provide more stable and reliable power coupled with introduction of various hybrid projects combining.

Based on component, the electrical infrastructure is set to reach more than USD 84.5 billion by 2032, driven by the need for efficient.
