

Wind power system protection

Overview

What is a protection scheme in a wind electric plant?

Protection schemes within these types of equipment are designed by their manufacturers and are integral to the equipment. Wind Electric Plants are composed of many wind turbine generators (WTGs) which are connected to a collector substation through a collector system.

How to protect a wind turbine from lightning?

In order to plan protection measures, it is advisable to subdivide the wind turbine into lightning protection zones (LPZs). The lightning protection system of a wind turbine protects two sub-systems that can only be found in wind turbines, namely the rotor blades and the mechanical drive train.

What is a wind turbine protection scheme?

The wind turbine protection scheme may include voltage and frequency relaying to protect the generator. For example, some wind turbines may trip for frequencies at or below 95 percent of nominal, or above 103 percent of nominal, with an appropriate time delay.

What is a wind turbine surge protector?

Surge protectors are crucial parts intended to direct extra energy produced by voltage spikes away from vital wind turbine system components. LSP has designed a complete range of AC and Telecom-Data surge protectors for Wind turbine applications that are compliant with the IEC 61400 et IEC 62305 standards.

Are wind turbine surge protectors compliant with IEC 61400 & 62305 standards?

LSP has designed a complete range of AC and Telecom-Data surge protectors for Wind turbine applications that are compliant with the IEC 61400 et IEC 62305 standards. Wind turbines are at high risk of lightning strikes. Wind

turbines are usually located in open areas with excellent wind resources.

Do wind turbine generators and static VAR sources need to be protected?

Although the report addresses coordination with wind turbine generator protective devices and static VAR sources, protection of the wind turbine generators and static VAR sources themselves is not included. Large WEPs are becoming more prevalent as generation sources on the power system.

Wind power system protection

Innovating at lightning speed: How a team of LM Wind ...

Innovating at lightning speed: How a team of LM Wind Power engineers developed the industry's first lightning protection system At any given moment ...

WhatsApp Chat

Wind protection

A choice of switching and protection components appropriate to a particular wind turbine design is essential for smooth operation and the minimization of the effects of faults.

(PDF) Protection of Wind Electric Plants

It is important to ensure that all the subsystems are well protected and coordinated to maximize the reliability (security and dependability) of the overall protection and control ...
