

Zinc-bromine flow battery lithium battery

Overview

A zinc-bromine battery is a system that uses the reaction between metal and to produce, with an composed of an aqueous solution of. Zinc has long been used as the negative electrode of. It is a widely available, relatively inexpensive metal. It is rather stable in contact with neutral and alkaline aqueous solutions. For this reason, it is used today in and primaries.

Zinc-bromine flow batteries and lithium-ion batteries are often compared due to their roles in energy storage. While lithium-ion batteries are known for their high energy density and widespread usage in consumer electronics, zinc-bromine offers distinct advantages for large-scale applications.
